

Patient Access Policy

Date: 2026-07-21

Owner: Compliance Team

Priority: Medium

Patients may request copies of visit summaries, prescriptions, and laboratory reports.

Staff must verify the patient's identity before releasing medical records.

Access requests should be completed within the hospital's approved timeline.

Risks:

- Identity verification failures may expose private records.
- Delayed responses may create patient complaints.

Actions:

- Confirm identity before record release.
- Log all record access requests.
- Escalate delayed access requests to compliance staff.
